## **Introduction**

### **1.1 Background**

This manual is specifically designed for the use of Quality Electric Service employees. It will help you maintain, organize, and keep detailed records. In this manual you'll find screenshots, explanations, and instructions on how to properly use the system.

You may need to use this manual a couple times before fully understanding the system, once you get used to it you might not need to use this guide anymore, but it will be here for you to reference.

### **1.2 About Your System**

This system is internal only software, meaning customers do not have access to use it. As of right now the current version has no customer login or account creation.

The source code will be soon on Github after some time

## **Basics: User and Administrator Access**

### **2.2 Accessing Your System**

You can access your system through any browser. Your system Administrator determines whether you have access to the admin version of the system. There aren't many differences between the User and Admin accounts. Administrators can edit, add, and delete schedules, and create new Team Members. Users are unable to do so.

Login by filling out the Email and Password fields, this will take you to the main home page of the Quality Electric Services system.

Entering an invalid email will provide an error message as follows:

Entering an invalid password will provide this error message:

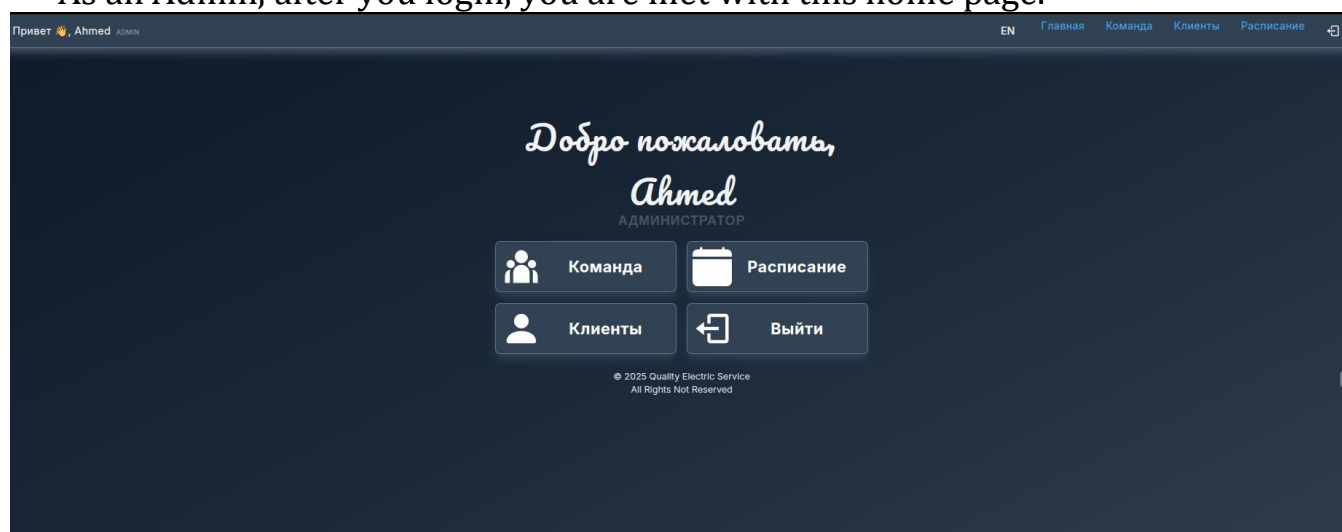

If you forget your password, please contact your system Administrator in order to reset your password.

## Administrator Accounts

### 3.1 What Can I Do As An Admin?

As an Admin, after you login, you are met with this home page.

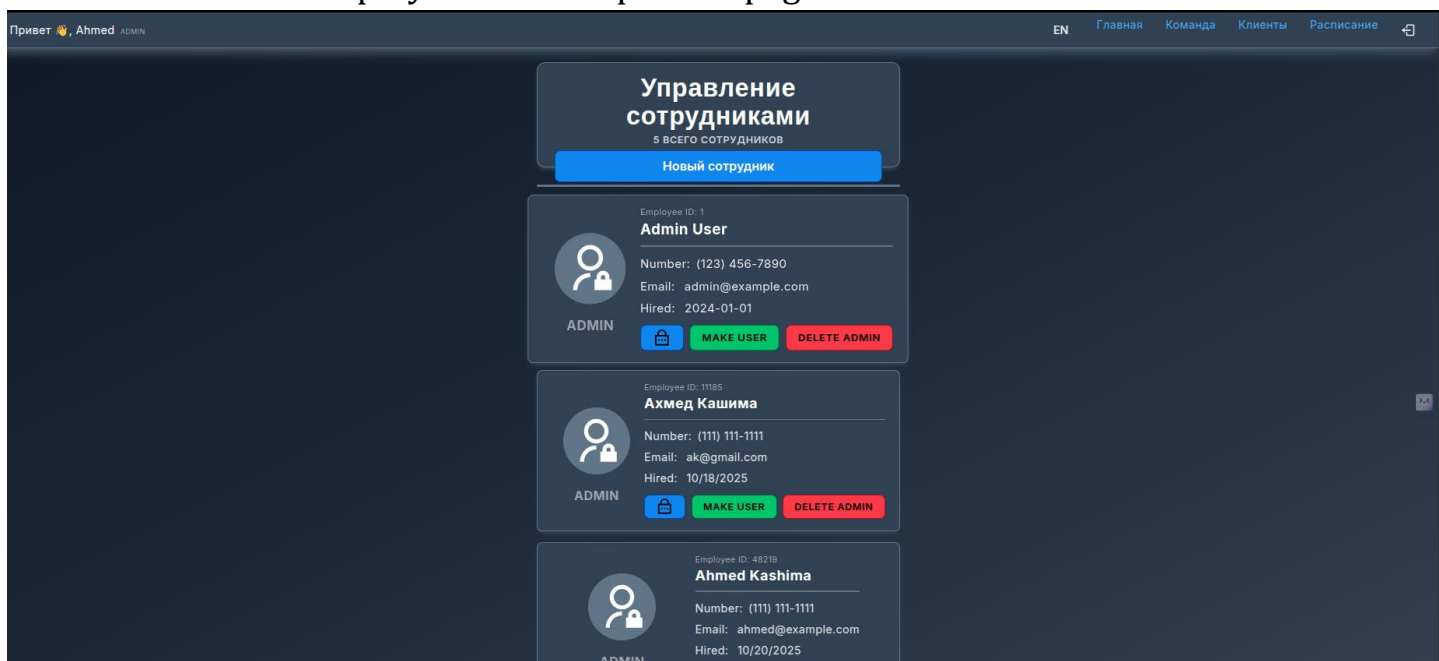

You are able to access the following sections as an Admin.

- 1 Team – Add, Edit, and Delete Team Members
- 2 Clients – Add, Edit, and Delete Clients and Jobs
- 3 Schedule – Add new Jobs for completion and who is tasked with them.
- 4 Logout – Take you back to the Login Page

For greater detail of what you can do in each section please read below.

### 3.2 Team

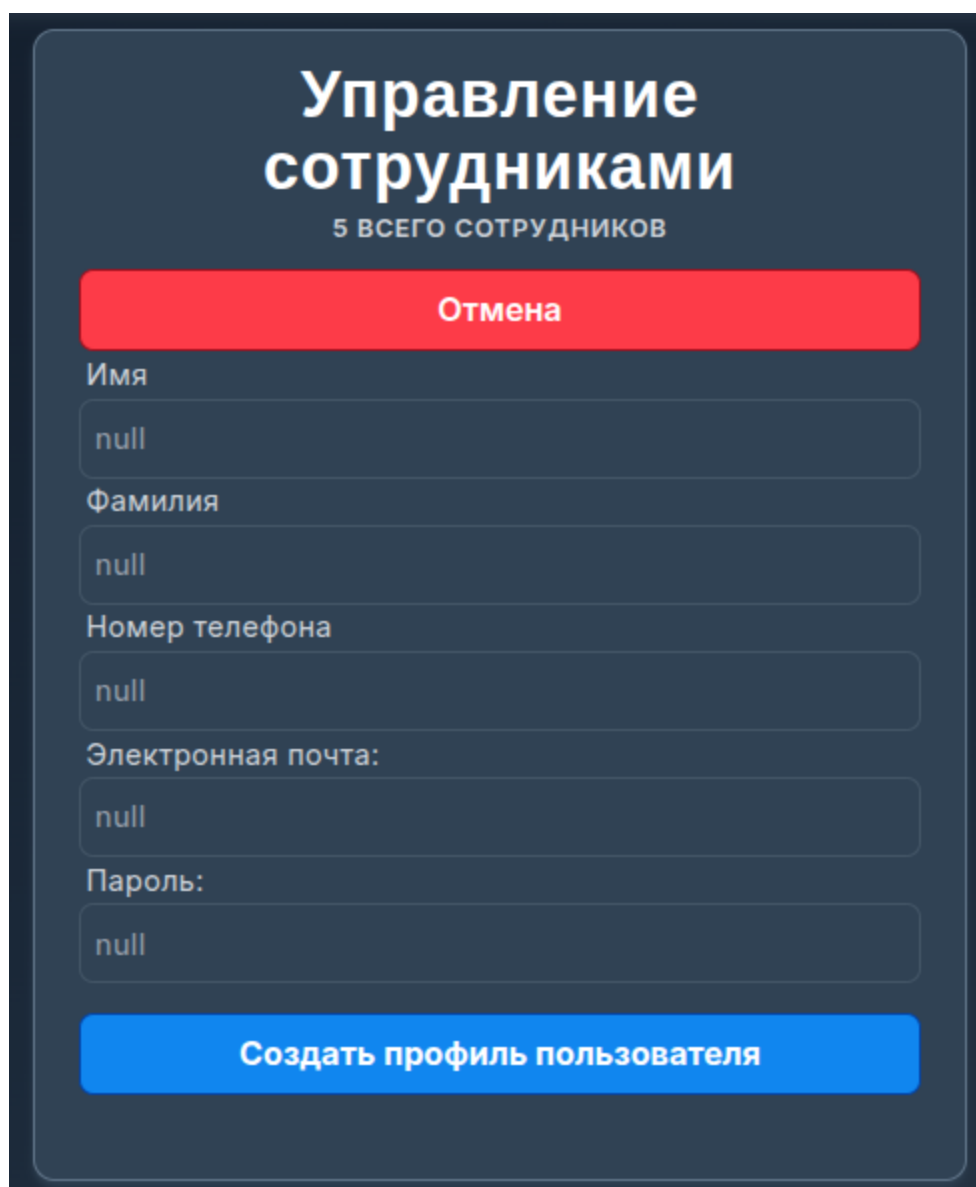

When accessing the Team Section of the Home Page or Navigation Bar, you open a list of all the employees that have been entered into the system. From here you're able to see the information of the accounts, this includes EmployeeID, PhoneNumber, Email, and DateHired. As an Admin you're able to "Make Admin" or "Delete User" for each team member. You're also able to create "New Employee" at the top of the page.

After selecting “New Employee” a menu will open so that you may fill out the information of the new employee, if you click this accidentally, there is a cancel button at the top.

The fill in menu includes First and Last Name, Phone Number, Email, and a filler Password to be changed last.

***\*\*NOTE\*\* You are able to make a User account an Administrator account after completion by finding their profile in the list of team members and promoting them.***

After an employee is added, they will be put into the list of employees below.

To return to the Home Page use the navigation bar at the top of the page, if you'd like to move to a different section of the system, you can do that from here as well.

### 3.3 Clients

When selecting the Clients section of the system, you are brought to a client creation and search menu. You can create customer profiles in the top menu. You must fill in all the information to create a new customer profile. Below is what that menu looks. Once the information is correctly filled out, clicking the "Create Client Profile" button will add the new profile to the database.

 A screenshot of a web form titled "Управление клиентами" (Client Management) in Russian. The form is set against a dark blue background with white text. It contains several input fields for client information, each with a "null" placeholder. The fields are arranged in a grid: Name (Имя) and Surname (Фамилия) in the first row; Phone number (Номер телефона) and Email (Электронная почта) in the second row; and a third row with four fields: Street address (Адрес улицы), City (Город), State (Штат), and Postal index (Почтовый индекс). At the bottom of the form is a prominent blue button with the text "Создать профиль" (Create profile).

From the search bar you may search for clients by name, when you find the customer you're looking for, there is a drop-down arrow to expand the information of the client.

After selecting the drop-down arrow, the Phone Number, Email, Address, State, and Zip Code are there for you to view. From this menu you may also "View Jobs" of that the customer and "Delete Customer" to remove them from the system.

***\*\*WARNING\*\*** If you delete a customer, you will lose the jobs associated with said customer, therefore in order to delete a customer a confirmation popup will ask if you are sure you want to delete the customer.*

Генерета Так Как Надо

When Creating a Job, it is important to note down any important information that a technician may need to know before they get to the Job Location. In the job creation process you must fill in the Date and Time, the type of Generator and the type of Service, from the drop-down menus, that the Client is requesting.

There is also a section for additional notes at the bottom of the form. Here you may put any additional requests from the client, as well as issues, warnings, or possible problems.

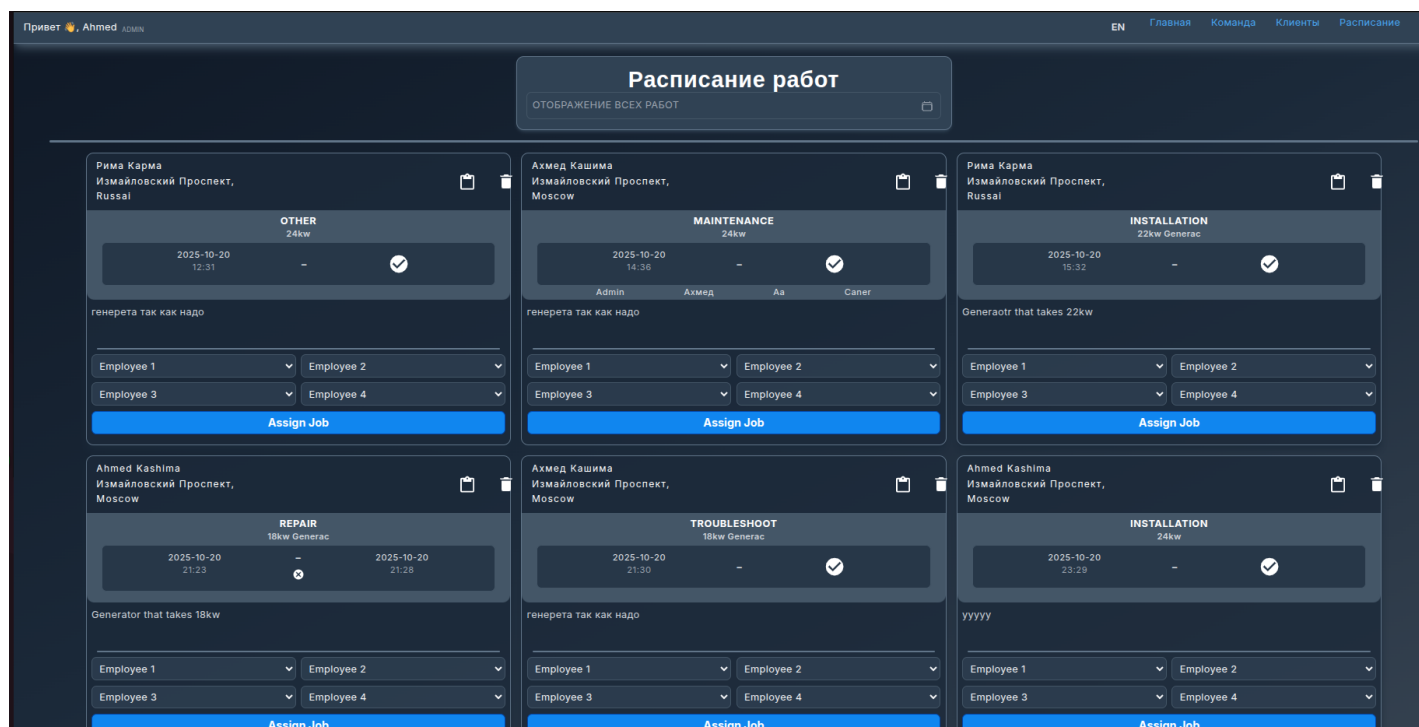

The screenshot shows a dark-themed form with four main sections:

- Date:** A text input field with the placeholder "mm/dd/yyyy" and a calendar icon on the right.
- Time:** A text input field with the placeholder "--:-- --" and a clock icon on the right.
- Generator:** A dropdown menu with the placeholder "(Please Select a Value)". The open list shows options: "(Please Select a Value)", "Generac", "Bruce's Engine", and "Predator Ultra".
- Service Type:** A dropdown menu with the placeholder "(Please Select a Value)". The open list shows options: "(Please Select a Value)", "Installation", "Maintenance", "Repair", "Troubleshoot", and "Other".

### 3.4 Schedule

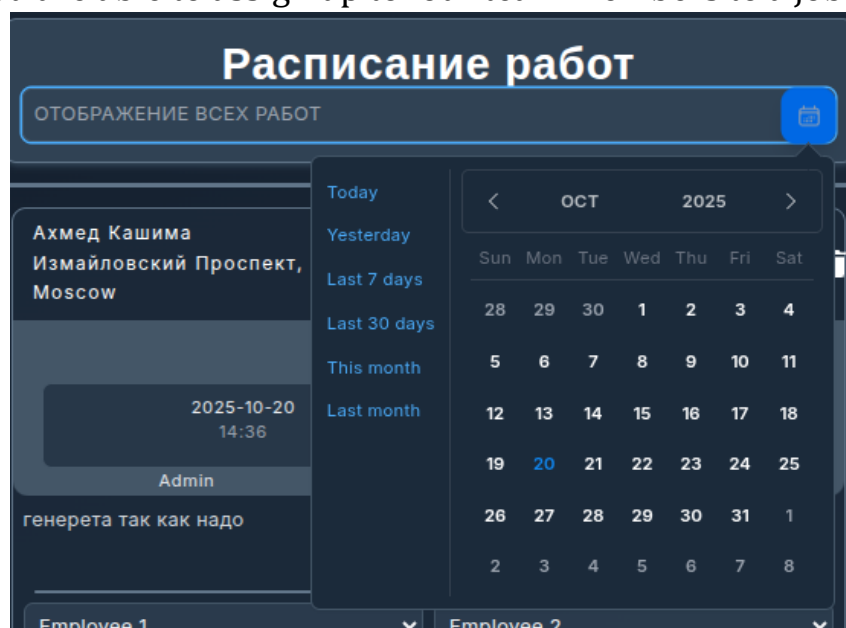

Going to the schedule tab will bring up a menu where you are able to search for jobs based on the date or a variety of other options. From this menu you are able to find the jobs schedules for a specific date and assign employees to work on them.

Jobs can also be deleted and completed from this screen using the trashcan and check mark respectively.

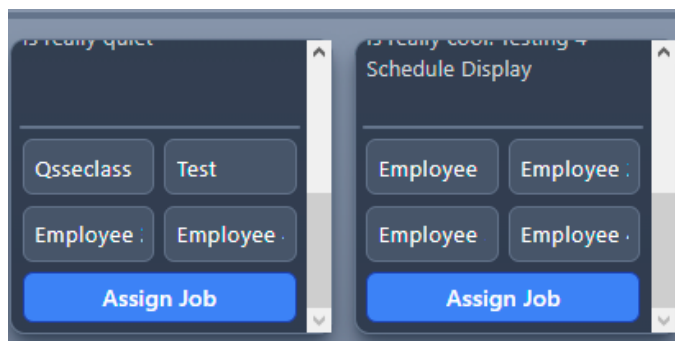

From the search bar it will take you to this calendar where you may choose a date, after choosing a date, all the jobs from that day will show.

For the 19<sup>th</sup> of April 2023 there are two jobs at 10:25am, after searching for that date. You are able to assign up to four team members to a job. After you

schedule a technician for a job, that technician will be able to view their schedule and see what jobs they are scheduled for.

After you schedule a technician for a job the following alert will occur.

If a technician is already added to a job an error will occur as follows.

If a technician accidentally completes a job, you may be contacted in order to set the job as incomplete. If that situation arises, the small circle with an “x” will set the job as incomplete.

As a job is set as incomplete an alert will show at the top confirming that the job was set as incomplete.

Jobs are also able to be edited with the clipboard button located on the left of the trashcan. In this menu you are able to change anything about the job that was previously scheduled.

For example, say a client needs to change the date of their service or they need to change the type of service. This is where you would change that instead of creating a completely new job and deleting the old one with the wrong information.

### 3.5 Password Recovery: Administrator Role

In order for an individual to recover their password, they must contact an Administrator. As an Administrator your job is to find that person on the Team page and retrieve a recovery code for them to use in resetting their password.

To do this, click the BLUE lock button.

After you press this button a notification at the top of the screen will come up with a recovery code. You must give it to the individual who needs to reset their password. It looks something like this just the code will be random.

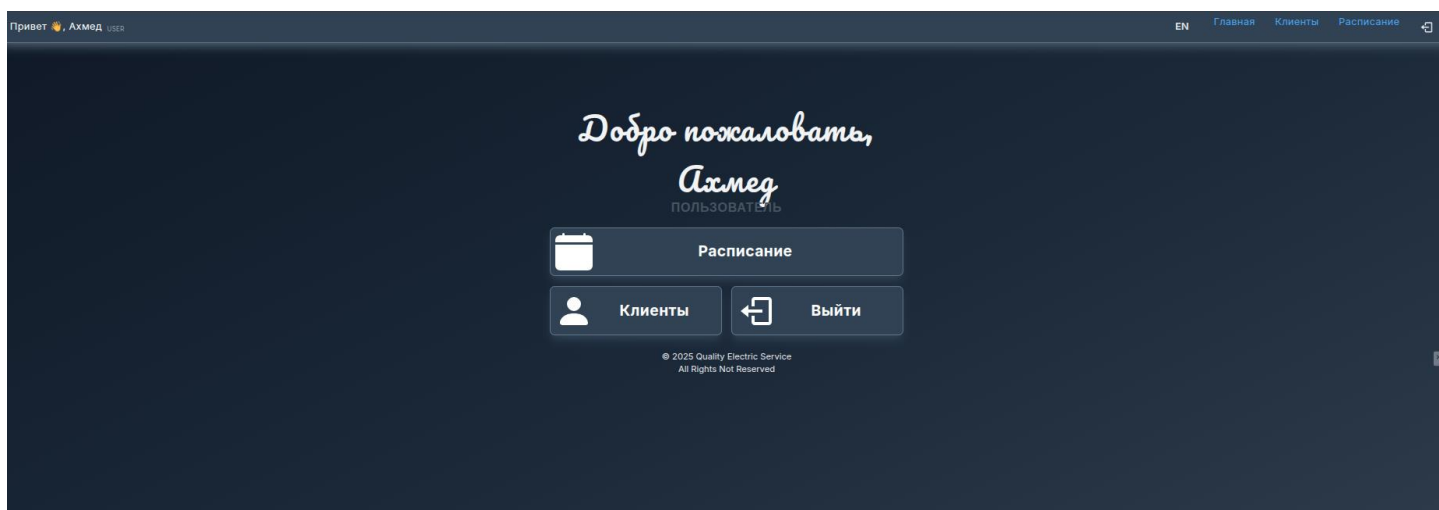

After you pass the code along to the individual who needs to reset their password, your job in the matter is complete.

## User Accounts

### 4.1 What Can I Do As A User?

As a User, after you login, you are met with this home page.

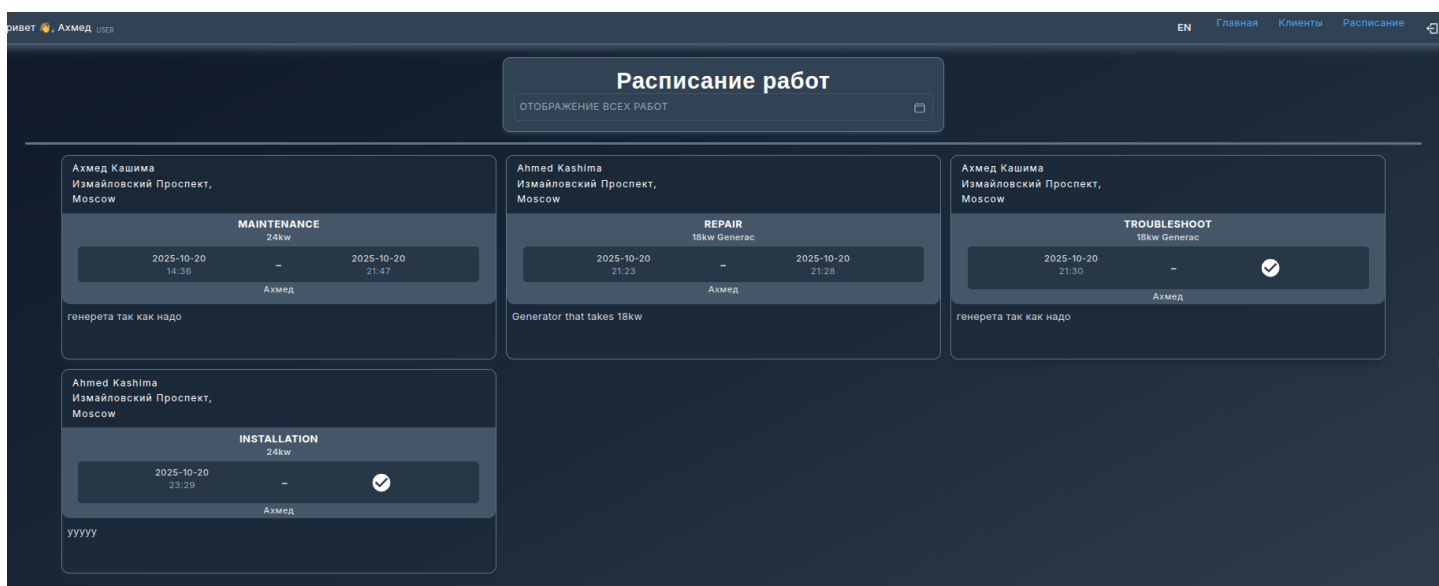

You are able to access the following sections as a User.

- 1 Clients – Add, Edit, and Delete Clients and Jobs
- 2 Schedule – Add new Jobs for completion and who is tasked with them.
- 3 Logout – Take you back to the Login Page

For greater detail of what you can do in each section please read below.

## 4.2 Schedule

As a User, you are only able to see your own schedule. This is what jobs you have to do on what days. You can search what jobs you have based on the week, month, day, and more. Your jobs will give you a description of the job, whether it be repair, installation, etc. You can also see any additional notes left by your administrators.

When you have finished a job, you will select the check mark next to the date and it will automatically record the time and date you completed the job. When completing a job, your administrators will be notified through the scheduling section on their end.

If you were scheduled for a job on a specific day and it isn't coming up when you select the day please double check the date you selected, as well as the client's name, it is possible the date was changed. If you still can't find the job you're looking for contact your system administrator.

After you select the check mark a notification at the top of the screen will appear, stating that the record was created and the check mark will be changed to the automatically gathered date and time.

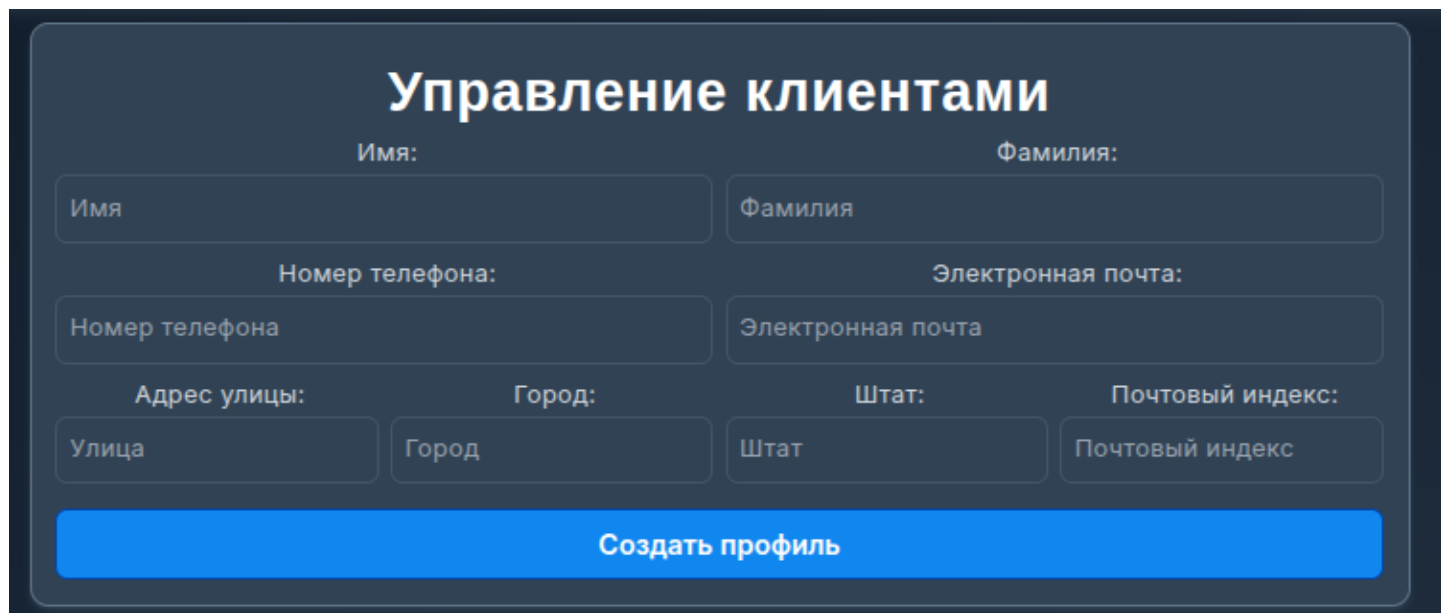

***\*\*NOTE\*\*** If you set a job to complete, you are unable to uncomplete said job afterwards. In order to uncomplete said job you must contact your system administrator to undo the change.*

### 4.3 Clients

When selecting the Clients section of the system, you are brought to a client creation and search menu. You can create customer profiles in the top menu. You must fill in all the information to create a new customer profile.

Once the information is correctly filled out, clicking the “Create Client Profile” button will add the new profile to the database.

When Creating a Job, it is important to note down any important information that a technician may need to know before they get to the Job Location. In the job creation process you must fill in the Date and Time, the type of Generator and the type of Service, from the drop-down menus, that the Client is requesting.

There is also a section for additional notes at the bottom of the form. Here you may put any additional requests from the client, as well as issues, warnings, or possible problems.

***\*\*NOTE\*\*** If there is something wrong with a client's profile that must be updated, for example their address has changed, or the type of generator they use has been changed and not updated in the system. Make sure to contact your systems Administrator in order to fix these discrepancies so there are no issues in the future.*

## **Forgotten/Changing Password**

In order for anyone to change their password they must request a recovery code from an Administrator. To proceed in changing your password take the recovery code you received from an Administrator and navigate to the “Forgot Password” link under the login menu. From there you will insert in your email the code you received and the new password you would like to use.

Once you have successfully changed your password a notification will appear confirming that you have in fact changed your password.

After you receive this notification, you have successfully changed your password and can login to your account.
